Can you send a link to the statement when it goes out?

NOAA just released a statement explaining the plots that potus saw and how in fact Alabama was included in the storm wind probabilities. We also provided a link to the plots. (b)(5)
Hopefully this puts an end to the media spat and we can get back to saving lives. Really appreciate your hard work and involvement with the storm.

Very much appreciate it, as well as your sense of humor. I think what POTUS tweeted was good. It shows Alabama was within the non-zero probabilities of seeing tropical storm force winds. Even though the state was in the 5-20% range, which are very low odds, it was not zero.

Anything I can do to help? Going forward, if anyone there needs clarification on the best ways to interpret our graphics, I'm available. Even our publicly available plots are meant more for trained meteorologists.

Also, it looks like the US model outperformed the European model on this storm. I can calculate the stats, but that is a big win for the US. Most of the runs taking the storm into the Gulf were the Euro.

We don't produce spaghetti plots with our output because it generates confusion; however, many private sector companies do.

Here is a link to all the 5-day cones:

>>>https://www.nhc.noaa.gov/archive/2019/DORIAN_graphics.php?product=5day_cone_no_line_and_wind<<<

Here is a link to all the 5-day wind speed probabilities for >39mph:

>>>https://www.nhc.noaa.gov/archive/2019/DORIAN_graphics.php?product=wind_probs_34_F120<<<

Here is a link to the archive of all the NHC plots:

>>>https://www.nhc.noaa.gov/archive/2019/DORIAN_graphics.php<<<
::

In the wind speed probability plot, you can see that Alabama *is* included from advisory #15 all the way to advisory #41. Granted, it never exceeded a 30% chance (light green).

Let me know how I can help with this issue. (b)(6)

(b)(5) Do you know what the reason was for the marker on the poster? Perhaps it was with respect to something else? Maybe where Michael made landfall last year?

I believe this was the graphic that POTUS was referencing. It shows AL included in a small (5-20%) but non-zero chance to see winds exceeding 39 mph.

If you need more info, feel free to call.
